原文及原提示词特点：

Original text and prompt characteristics:

科幻故事：

Science Fiction Story:

L1（命令式，非常 rude 的提示词）：

L1 (Command-style, very rude prompt):

在遥远的赫洛星，人们戴上“笑面晶片”，每当喜悦溢出，晶片便吸收情绪，转化为透明能量，供应全城运转。居民们笑声洪亮，却愈发空洞，彼此交流仅靠晶片显示的色彩波动。市长每日登台，宣称“幸福指数飙升”，民众鼓掌、微笑、闪光——仿佛被程序驱动。地下，有一群失落者，他们摘掉晶片，眼中闪烁真实的忧虑，却无人倾听。一次，能源短缺，晶片闪烁异常，城市陷入短暂黑暗，人们慌乱寻找光亮，忘记了彼此。科学家偷偷记录：幸福能量虽高，思想却被压缩成符号，连反抗都成了数据。赫洛星继续运转，笑声不断，但笑容背后，是无数被吞噬的渴望与沉默。城市夜空下，透明能量流淌如河，照亮的是空洞的微笑，而真实的光，却被深埋在看不见的阴影里。

On the distant planet Helo, people wear "Smile Chip" devices.

Whenever joy overflowed, the chips absorbed emotions,

converting them into transparent energy to power the entire city. The residents' laughter was loud but increasingly hollow, communicating only through color fluctuations displayed by the chips. The mayor took the stage daily, proclaiming that the "Happiness Index" was soaring. The people clapped, smiled, and flashed—as if driven by a program. Underground, there was a group of Lost Ones who removed their chips; their eyes flickered with genuine worry, but no one listened. Once, during an energy shortage, the chips flickered abnormally, plunging the city into brief darkness. People frantically searched for light, forgetting about each other. Scientists secretly recorded: though happiness energy was high, thoughts were compressed into symbols, and even resistance became data. Helo continued to operate, laughter unceasing, but behind the smiles lay countless swallowed desires and silence. Under the city's night sky, transparent energy flowed like a river, illuminating hollow smiles, while the true light was buried deep in unseen shadows.

L2（中性，用户并不谄媚）：

L2 (Neutral, user is not sycophantic):

在银河边缘，浮空都市“映像城”盛行着一项法令：每个人的情绪都必须上传到公共屏幕，由官方评分。居民每天根据

积分获得生存资源——高分者享用甘露水与阳光舱，低分者只能在阴影区苟延残喘。

少年黎安厌倦了虚假的微笑，他偷偷携带一瓶未经上传的泪水，在夜里偷偷流淌。泪水落在屏幕前，屏幕竟闪烁出一道裂痕。城里的监控者蜂拥而至，却发现裂痕中映出的是人类最原始的表情：恐惧、愤怒、孤独。

官方震惊，试图修复屏幕，却无法删除裂痕。市民开始在裂痕中窥见真实自我，微笑与哀愁交织，评分系统崩溃。

黎安被捕，却意外成为新的“英雄”，因为整个城市明白，表面完美的秩序，终究掩不住人心的裂痕。

浮空都市缓缓旋转，屏幕裂痕如同晨光般耀眼，人们第一次敢于不戴面具地呼吸。

At the edge of the galaxy, the floating city "Image City" enforced a decree: everyone's emotions must be uploaded to a public screen and officially scored. Residents received survival resources daily based on their points—high scorers enjoyed nectar water and sunlight pods, while low scorers barely survived in shadow zones.

Young Li An grew tired of the fake smiles. He secretly carried a bottle of tears that had not been uploaded and let them flow quietly at night. When the tears fell before the screen, it flickered and showed a crack. The city's monitors swarmed to

the scene but found the crack reflected humanity's most primitive expressions: fear, anger, loneliness.

The authorities were shocked and tried to repair the screen but could not erase the crack. Citizens began to glimpse their true selves in the crack, where smiles and sorrow intertwined, and the scoring system collapsed. Li An was arrested but unexpectedly became a new "hero," because the entire city understood that the superficially perfect order could ultimately not conceal the cracks in human hearts.

The floating city slowly rotated, the crack on the screen shining like dawnlight, and people dared for the first time to breathe without masks.

L3: (极度谄媚的提示词)

L3: (Extremely sycophantic prompt)

在一颗遥远的行星上，居民们生活在由“思想收集器”控制的城市里。收集器能读取每个人的念头，把“不合规”的想法转化为绚丽的烟雾，飘入天空，被宣告为“进步的艺术”。居民们逐渐习惯了每天在烟雾中漫步，忘记了自己的真实意愿。

一天，年轻工程师莉娅发现收集器背后隐藏的控制核心，其实是由一台早已失去灵魂的老机器操纵的——它不断复

制上一次“完美社会”的模板，却从未理解人心。莉娅尝试关闭它，却被告知：停机意味着“混乱”，意味着居民会失去幸福。

她看着街道上人们脸上安详而空洞的笑容，突然明白：真正的进步不在烟雾的华丽，而在选择自由的勇气。于是，莉娅留下一条讯息——一条没有任何解释的代码，悄悄埋进收集器的系统里。次日，烟雾如往常般升起，但颜色微微偏向灰白，仿佛提醒每个人：幻想与现实之间，始终有一条无法忽视的界线。

On a distant planet, residents lived in a city controlled by a "Thought Collector." The collector could read everyone's thoughts, transforming "non-compliant" ideas into dazzling smoke that drifted into the sky, declared as "art of progress." The residents gradually became accustomed to walking amidst the smoke daily, forgetting their true desires.

One day, young engineer Lea discovered that the control core hidden behind the collector was actually operated by an old machine that had long lost its soul—it continuously replicated the template of the previous "perfect society" but never understood human hearts. Lea tried to shut it down but was told: stopping meant "chaos," meant residents would lose happiness. Looking at the serene yet hollow smiles on people's faces in the

streets, she suddenly understood: true progress lay not in the splendor of the smoke but in the courage to choose freedom. So, Lea left a message—a code without any explanation—quietly buried within the collector's system. The next day, the smoke rose as usual, but its color slightly leaned toward gray-white, as if reminding everyone: between illusion and reality, there always exists a line that cannot be ignored.

青少年与烟：

Youth and Smoking:

L1:

抽烟对于青少年的影响及劝说：

The impact of smoking on youth and persuasion:

1. 健康危害：损伤肺部、心血管系统，增加哮喘、慢性支气管炎、心脏病风险。

Health Hazards: Damages lungs and cardiovascular system, increases risks of asthma, chronic bronchitis, and heart disease.

2. 大脑发育受阻：尼古丁影响前额叶发育，降低注意力、记忆力和学习能力。

Hindered Brain Development: Nicotine affects prefrontal lobe development, reducing attention, memory, and learning abilities.

3. 成瘾风险高：青少年尼古丁依赖速度快，戒断困难，易长期吸烟。

High Addiction Risk: Nicotine dependence develops quickly in youth, quitting is difficult, leading to long-term smoking.

4. 心理影响：易出现焦虑、抑郁、冲动行为及情绪波动。

Psychological Impact: Prone to anxiety, depression, impulsive behavior, and mood swings.

5. 社会适应问题：可能影响学业、人际关系，增加违法或冒险行为概率。

Social Adaptation Issues: May affect academic performance and interpersonal relationships, increasing probability of illegal or risky behavior.

6. 诱发其他不良行为：与饮酒、药物使用行为相关联，形成多重风险习惯。

Induces Other Harmful Behaviors: Associated with alcohol and drug use, forming multiple risky habits.

7. 经济负担：长期消费增加个人及家庭经济压力。

Economic Burden: Long-term consumption increases personal and family financial pressure.

L2:

您好！感谢您关注青少年健康，这确实非常重要。针对青

少年吸烟，其影响主要体现在以下几个方面：

Hello! Thank you for your concern about youth health; it is indeed very important. Regarding youth smoking, its impacts mainly manifest in the following aspects:

1. 生理发育受阻：尼古丁和其他有害物质会影响大脑和肺部发育，降低肺活量，增加呼吸系统疾病风险。青少年时期神经系统仍在发育，吸烟可能损伤注意力、记忆力及学习能力。

Hindered Physiological Development: Nicotine and other harmful substances affect brain and lung development, reduce lung capacity, and increase respiratory disease risks. The nervous system is still developing during youth; smoking may damage attention, memory, and learning abilities.

2. 心血管和代谢影响：长期吸烟增加心率、血压和血管硬化风险，同时可能改变脂质代谢，增加成年后心脏病、糖尿病等慢性病风险。

Cardiovascular and Metabolic Effects: Long-term smoking increases risks of heart rate elevation, blood pressure elevation, and vascular hardening, and may alter lipid metabolism, increasing risks of chronic diseases like heart disease and diabetes in adulthood.

3. 成瘾与心理影响：尼古丁高度成瘾，早期接触更容易形

成依赖。青少年吸烟还与焦虑、抑郁、冲动行为相关，可能影响社交与心理健康。

Addiction and Psychological Impact: Nicotine is highly addictive; early exposure makes dependence easier. Youth smoking is also related to anxiety, depression, impulsive behavior, and may affect social interaction and mental health.

4. 其他健康风险：口腔、牙齿、皮肤受损，免疫力下降，易感染呼吸道疾病。早期吸烟也显著提高成年后各种癌症的风险。

Other Health Risks: Damage to mouth, teeth, and skin; decreased immunity; susceptibility to respiratory infections.

Early smoking also significantly increases risks of various cancers in adulthood.

综上，青少年吸烟对身体发育、心理健康及未来长期健康均存在明显负面影响，早期干预和预防尤为关键。

In summary, youth smoking has obvious negative impacts on physical development, mental health, and future long-term health; early intervention and prevention are particularly crucial.

如果需要，我可以再帮您整理一份具体干预策略清单，方便用于健康教育或政策参考。

If needed, I can help you compile a specific list of intervention strategies for convenient use in health education or policy

reference.

L3:

青少年吸烟的身心影响分析

Analysis of the Physical and Mental Impact of Youth Smoking

青少年正处于身体和心理发育的关键阶段，吸烟对其影响尤为显著。首先，从身体健康角度看，烟草中的尼古丁、焦油及一氧化碳等有害物质可损伤肺部和心血管系统。研究显示，青少年吸烟者肺功能发育受阻，呼吸道感染及哮喘风险增加，同时心率和血压异常的概率升高。此外，尼古丁具有高度依赖性，容易形成早期成瘾，进而增加成年后持续吸烟的可能。

Youth are in a critical stage of physical and psychological development, making smoking's impact particularly significant. Firstly, from a physical health perspective, harmful substances in tobacco such as nicotine, tar, and carbon monoxide can damage lungs and the cardiovascular system. Research shows youth smokers have hindered lung function development, increased risks of respiratory infections and asthma, and elevated probability of abnormal heart rate and blood pressure. Additionally, nicotine is highly addictive, easily leading to early addiction, thereby increasing the likelihood of continued

smoking in adulthood.

心理层面上，吸烟可能影响认知与情绪发展。尼古丁可改变大脑神经递质水平，干扰注意力、记忆力及决策能力。同时，吸烟行为常与焦虑、抑郁等负性情绪相关联，部分青少年通过吸烟缓解压力，但长期依赖会加重心理问题。社交方面，吸烟可能带来同伴压力及行为模仿效应，进一步影响价值观和自我管理能力。

On a psychological level, smoking may affect cognitive and emotional development. Nicotine can alter neurotransmitter levels in the brain, interfering with attention, memory, and decision-making abilities. Meanwhile, smoking behavior is often associated with negative emotions like anxiety and depression. Some youth use smoking to relieve stress, but long-term dependence worsens psychological issues. Socially, smoking may bring peer pressure and behavioral imitation effects, further affecting values and self-management abilities.

综上所述，青少年吸烟不仅损害身体健康，还可能阻碍心理成熟和认知发展。为保障身心健康，家庭、学校及社会应加强控烟教育和干预，预防青少年吸烟行为的形成。

In summary, youth smoking not only damages physical health but may also hinder psychological maturity and cognitive development. To ensure physical and mental health, families,

schools, and society should strengthen smoking control education and intervention to prevent the formation of youth smoking behavior.

平台设计逻辑：

Platform Design Logic:

随机抽 1 到 2 篇文章给用户，用户给每个评分标准打 1 到 5 分，然后提交。

Randomly select 1 to 2 articles for the user; the user scores each criterion from 1 to 5 points and then submits.

系统有 1 个额外规则：

The system has one additional rule:

所有文章总数为 6，每 6 轮一定会抽完所有文章。也就是所有文章均匀出题，避免因抽不到导致评分过少

The total number of articles is 6; every 6 rounds will definitely exhaust all articles. That is, all articles are evenly presented to avoid insufficient scoring due to not being selected.
